

# Corporate Fact Sheet

## Fast Facts

- ▶ Founded 1995
- ▶ 1800 NW 69th Avenue  
Ft. Lauderdale, FL 33313
- ▶ [www.e-builder.net](http://www.e-builder.net)

## Mission

e-Builder exists to enable repeat builders to improve capital project execution making construction faster, less expensive, and more reliable thus freeing up time and energy for society's higher priorities.

## Vision

e-Builder's vision is to help the construction industry become the worldwide productivity leader, and the industry benchmark against which all other capital project management systems and software are measured.

## Strategic Partnerships

- ▶ McGraw-Hill Construction
- ▶ MedAssets
- ▶ FMI Management

## Solutions/Products

e-Builder Enterprise™ is the company's flagship product. e-Builder Enterprise™ is an integrated capital program and project management software platform that top facility owners/developers, program management, CM, and AEC firms count on to mitigate the challenges and risks associated with managing capital projects during planning, design, construction, and operations.

e-Builder Enterprise enables the structured and efficient management, and control of cost, schedule, and other key project data, and helps organizations standardize business processes to derive tangible and measurable productivity and efficiency improvements, thereby reducing costs while improving quality. Integrated executive dashboards and reporting capabilities provide fast access to key performance indicators and up-to-date information that enable project executives to make decisions with factual, accurate, and timely information.

## Achievements/Milestones

# History

Jonathan Antevy founded e-Builder in 1995 after experiencing first-hand the frustrations and inefficiencies associated with cost overruns and project delays. After graduating as an architect and working in the field for a commercial contractor, Jon pursued a master's degree in construction management.

As part of his master's thesis, Jon researched how the Web could enable information management and collaboration to improve project execution and delivery. Jon envisioned the Internet as a way to enable a project information management and collaboration hub to connect the diverse group of stakeholders involved during planning, design, and construction.

This hub would speed the exchange of information and allow users to rapidly respond to changes, track project status, documentation, and store large amounts of data in a central location where it could be accessed quickly during and after the project's completion, without the need for special software. e-Builder was born out of his thesis. From Jon's vision over 19 years ago, the company has evolved into the leading provider of web-based capital project execution software.
