

Case Number	Release Note
00069294	Multi-line text values entered in a text block form field on e-Builder Mobile™ for Android will preserve line breaks without showing the html encoded value ().
00069952	In the Cost module, when a commitment invoice is being approved, a cost violation is now displayed whenever applicable.
00070682	When logging in to e-Builder Mobile™ for iOS v 1.2.5, account names starting with an asterisk will also be available to choose from.
00070829	The Home and Plus tab will no longer be missing their lower borders when inactive in IE8.
00070885	Printing via File > Print in IE8 will not cause the browser to crash.
00070938	Process instances will not jump to the first editable field when that field requires scrolling down to view.
00071076	Editing a meeting item discussion on the Event Details Page will now allow any portion of the text to be highlighted.
00071268	Mail merges for process instances with hundreds of custom field values will no longer time out.
00071301	When using the Commitment Change screens, custom fields will now accept default values when clicking Add Item without first opening the custom field dialog box. Additionally, when saving in the Cost module or submitting a process, if the footer item has not been added but is valid, it will add the item before it is saved.
00071311	Columns and headers are now locked on the Global Custom Field Dependencies and Process Data Field Dependencies pages.
00071463	When importing a process from the Processes module, a check will be done for non case sensitive characters on drop-down data field values, multi-select, and radio button list options, to ensure duplicate values are not created.
00071743	Custom commitment adjustments now set funding distributions for new commitment line items to 100%.
00072108	The amount retained or released now shows on the Invoice Details page of a commitment invoice.
00072770	Actuals approved will now maintain their value after changing commitment line item details.
00072827	Headers on the Folder Permissions page will now stay viewable as the user scrolls down.
00073040	Selecting more than 40 contacts to invite will no longer cause the Potential Bidders Page to halt when loading the contacts.
00073180	Reports exported from the Reports module with date columns can now be sorted in Microsoft Excel® by using the date columns.
00073213	In the Reports module, when creating a formula field that contains a string, it should be placed within the Trim function so that the formula can be flagged as a string type and processed properly.
00073242	In the Cost module, returning a unit cost commitment change to draft status from pending status no longer causes the unit cost to be 0.
00073274	Downloading multiple attachments at once from the attached documents tab on a process will stream out the zip file without any browser errors.
00073313	On the process instance page, the date and time that a process was attached is now recorded in the user's time zone.
00073327	Non administrative users who have only view cost permission, and not modify cost permission, will be able to see all available projects listed in the project drop-down menu on the Cost Summary page.

00073541	On the Submittal Item Details page, the Update Status button will now work in IE8.
00073555	If a user's permission is removed from the main folder while they are viewing the Documents page, a message will be displayed informing them of this change.
00073625	Changing a project's image will now show the correct image on the Project Details page.
00073940	Deleting a form type that is associated with a View that contains permissions with roles will no longer cause a page error.
00074050	In the Planning module, exporting a project plan or comparing results will no longer result in a page error.
