

## July Maintenance Release Notes

The following is a list of resolved issues for the month of July. If you have any questions regarding this maintenance release, please contact e-Builder Support at [support@e-Builder.net](mailto:support@e-Builder.net) or 888-288-5717.

Module	Issues Corrected
Companies/Contacts	1
Cost	15
Dashboards	1
Documents	1
Forms	4
Mobile App	1
Planning	1
Processes/Workflow	11
Projects	1
Reports	4
Schedules	2
Search	1
Setup Admin	4
User Setup	1

Module	Release Note	Case Number
Companies/Contacts	The Current Value column located on the Commitments tab of the Company Details page was left aligned as opposed to right aligned. This field is now right aligned to be consistent with e-Builder interface standards.	00077577
Cost	When Choosing to Save and Add All Line Items the Custom Field Values would be lost under Budget Details->Budget Changes-> Add Change.. Also the Invalid Data Banner would not appear when fields were invalid.. Now the Custom Fields will retain their values when adding all line items to the change and the Invalid Data Banner will appear when any of the fields have invalid or missing values.	00077275
Cost	Not all budget line items that violated cost controls appeared in the cost violation message. This only occurred when there was more than one line item on a commitment. Now, when approving a commitment that violates cost controls, all of the budget line items that were violated will be listed so users can take corrective action for the appropriate items.	00077279
Cost	A page error was occurring when attempting to void a commitment invoice while the Show Approved Commitment Items check box was selected. This issue has been corrected.	00077497
Cost	When editing a commitment in pending and approval requested status, clicking save would remove funding rules that were already selected. Now, saving commitments in any status will no longer remove funding rules that have already been selected.	00077498
Cost	In IE9 only, when attempting to collapse all after expanding sub categories when editing a Forecast in the Cost Module, IE9 would crash. Now, IE9 does not crash and a user is able to collapse all whenever the link to collapse all is selected.	00077544
Cost	Time stamps for forms attached to cost entities were displaying in GMT regardless of the persons time zone. Now, time zone will be displayed in the time zone of the user.	00077558
Cost	The Budget Approval date was not aligned properly on Confirm Approval page. This field is now left aligned.	00077572
Cost	A page error occurred on the General Invoice Details Page when an apostrophe was included in the account code. Now this page loads without error regardless of the characters included in the account code.	00077595
Cost	Invoice line item attachments were not appearing on the Add/Edit General Invoice page if the project did not have funding configured. These attachments now appear whether or not funding is configured.	00078158

Module	Release Note	Case Number
Cost	The filter row itself, or some elements of the filter row were included in the Excel export when exporting any grids that have filter functionality enabled in the Cost Module. Now, exported cost grids do not include any part of the filter in any browser, which makes sure that all rows and cells in the export are visible. When viewing any Cost Module grids with filtering enabled in IE7 with the font size increased in Setup > Preferences > Interface Settings, the filter button was wrapping below the filter textbox. Now, when viewing these grids under the described circumstances, the filter textbox does not honor the font-size increase, which makes sure that the filter button does not wrap underneath the filter textbox.	00078343
Cost	When viewing any grid in e-Builder Enterprise the width would extend, but not the length of the page, and had the floating scrollbar feature enabled, two horizontal scrollbars were visible. Now when viewing these grids, only one horizontal scrollbar will be visible.	00078382
Cost	Users were unable to generate a mail merge template for an invoice. This only occurred when generating a non-Application for Payment invoice. Now when the user runs any type of invoice mail merge, the mail merge will generate correctly.	00078752
Cost	In processes, a cost violation was being shown for some general invoices when it should not have. Now, those general invoice processes are correctly moving forward without the cost violation.	00079683
Cost	When attempting to close a commitment, it was prevented because the actuals received differed from the current contract value by less than a penny. Users were unable to invoice or make commitment changes less than a penny thus preventing them from making corrections in order to close the commitment. Now, commitments can be closed if the difference is less than a penny.	00080087
Cost	An error occurred when users tried to add a Budget Line Item to an account which had Account Code Segments filled out, but not enabled. Now, when adding a Budget Line Item under these conditions, this will no longer cause an error.	00080231
Dashboards	While viewing a dashboard, clicking 'Refresh' was resulting in the error message 'Error while refreshing'. This behavior was noted for one specific dashboard, for a specific account. Now that dashboard can be refreshed with no error message shown.	00077503

Module	Release Note	Case Number
Documents	If the Documents module is accessed prior to applying a project template, the new document structure will now be seen in the Documents module without having to log out and back in.	00070076
Forms	A page error occurred when files were attached to a form from a local computer. This occurred only on form types that were configured to not require a folder when uploading. Now, the form is stored directly in the form instance and an error no longer occurs.	00076986
Forms	When printing from the message view popup, the printed document would not include all of the message body when the body was larger than the scrollable window. Now, the scrollable body area always fits the message size, and when printing, all of the body is now printed.	00077287
Forms	After a new project issue was posted, the Project Issues page was not refreshing and the Fill Out Form window did not close. Now the window closes after the issue has been posted and the Project Issues page refreshes on its own. Users no longer have to manually refresh the page or close the child window.	00077467
Forms	When attaching a file to a form using the Single File Upload tool, a page error occurred and this action could not be taken. This issue has been resolved.	00079650
Mobile App	On the e-Builder mobile app, a workflow that the user does not have permissions to start will not be available to be started by tapping the "start selected workflow" button.	00074476
Planning	When comparing Project Scenarios, the comparison would show items in red that had not been changed. Now, when comparing Project Scenarios, only items that have been changed will show up in red, so that users will not be confused about which items have been changed and which items have not been changed. This addresses the issue in both e-Builder Enterprise and when exporting from the comparison page.	00073150
Processes/Workflow	The notification attached to an external email was requiring user authentication even though it was not needed. The page was referencing a non-public component. This fix removes that authentication requirement by pointing that component to a public reference.	00075819
Processes/Workflow	For standard imports, exception messages will only be emailed to e-Builder staff and a generic message will be emailed to users.	00075931

Module	Release Note	Case Number
Processes/Workflow	A JavaScript error occurred when an item number was selected from the Commitment Change Item table in a process instance. This issue has been corrected.	00077429
Processes/Workflow	In a Form Instance, a JavaScript error occurred after clicking the Save button when an attached form was removed. This issue has been corrected.	00077465
Processes/Workflow	Filtering for processes on one project showed the same processes when filtering on another project. This only occurred in the Processes Tab when the original Project Look up drop down was enabled and the user was selecting a project and hitting the enter key instead of selecting a project and using the mouse to select a project. Now, when selecting a project and hitting the enter key, the search will now use the newly selected project when executing a search.	00077547
Processes/Workflow	Reason Code and Date Change fields will now have a red asterisk indicating they are a required field when create a budget change process instance.	00077603
Processes/Workflow	Retainage Release Column will no longer overflow into the next column on Process Instance details page.	00077678
Processes/Workflow	A page error occurred when attempting to copy a dynamic budget line item process, which prevented this action from taking place. Now users are able to copy dynamic budget line item processes without interruption.	00077832
Processes/Workflow	Daily inspection reports could not be submitted. This only occurred when the action was set to allow the user to add additional non-actors to the next step. The processes can now be submitted and moved ahead.	00078149
Processes/Workflow	Reordering columns on ManageDatafields page in process admin setup will no longer cause a script error.	00078280
Processes/Workflow	Entering change amounts for a commitment change process instance was not calculating the grid footer totals correctly in a consistent manner. Now, inputting change amounts will consistently calculate the footer total correctly.	00078514
Projects	On the Manage Permissions and Permissions by User pages, the Show All button appeared as a single word. A space has been added between these words and the button now reads as Show All.	00077629
Reports	Remaining to be paid column on commitment cost reports will now be calculated using current commitment value - actuals paid.	00076329

Module	Release Note	Case Number
Reports	Process Log reports configured with more than one process data field in the report criteria will no longer cause an error.	00076470
Reports	When a report was generated from the Reports module and then sent via email, the grand totals in the footer were not properly aligned. This issue has been corrected.	00076776
Reports	Reports using formulas that include Budget Cost Summary fields no longer produce an error message.	00078656
Schedules	When using an unsupported file type to import the schedule, an error message did not display, the files simply cleared out. An error message now appears when importing file types other than .mpp files during schedule imports.	00078063
Schedules	The default setting for Schedule Duration was displaying as duration instead of days. While importing a schedule using Microsoft Excel®, the field mappings did not automatically populate. Also, predecessor fields and task custom fields did not allow you to select from all of the column choices. These issues have been corrected.	00079849
Search	The Document search was not searching for document custom fields. This search type now includes document custom fields.	00078160
Setup Admin	When a copy of a workflow was created, the lookup fields did not copy over. Now when workflows are copied, the lookup fields are copied as well.	00076253
Setup Admin	A JavaScript error occurred when deleting form types. Form types can now be deleted without any page errors.	00077753
Setup Admin	When importing the schedule from the Setup module, there was an error in the note on the Schedule Import page, stating that only .xls/.xlsx files were accepted, in addition to .mpp files. This note has been corrected to state that only .mpp files are accepted.	00078963
Setup Admin	Standard Cost Import for commitment invoices was failing for a specific scenario when the commitment rule for the commitment was controlled total and performing cost violation checks. Now, the import executes without errors.	00079755
User Setup	The wrong cost permissions columns were hidden on accounts without forecasting or cost imports enabled. Now, the correct columns will be hidden on the cost permissions tab across the product when forecasting or cost imports are not enabled for the account.	00079313
