

e-Builder Enterprise, a leading cloud-based construction program management solution for owners of capital improvement programs, is now available on the FedRAMP Marketplace as a FedRAMP Ready construction program management solution designed specifically for federal facility owners available. Upon successful completion of a Readiness Assessment by a Third-Party Assessment Organization (3PAO), e-Builder was designated, by the FedRAMP Program Management Office (PMO), as a FedRAMP Ready solution.

The e-Builder Enterprise Government Edition project management information system (PMIS), now incorporates built-in, federally-approved levels of security controls and compliance features not offered by public clouds. Federal, state, and local governments will benefit from this additional level of security that is federally mandated. Agencies have been limited in improving their project management efficiencies because of the lack of FedRAMP PMIS options. Now, with e-Builder Enterprise Government Edition, they have not only an option, but an industry-leading solution that many of their peers outside of the federal sector have relied on for years to create greater efficiencies and cost management within their capital improvement programs.

FedRAMP is a standardized approach to security assessment, authorization, and continuous monitoring for federal government-authorized cloud products and service programs at the low, moderate, and high-risk impact levels. The FedRAMP program addresses the security of commercial cloud service providers and helps government officials manage risk in a cloud-based environment.

Get peace of mind that your data is safe and that your agency is in compliance with federal standards with a project management solution that will move your agency forward in today's cloud-driven commercial business environment.

e-Builder delivers a fully-integrated, owner-centric, cloud-based construction software solution focused exclusively on meeting the needs of facility owners and construction professionals. All the data managed from planning, design, procurement, construction and operations is fully integrated delivering transparency for owners to immediately, and with confidence, identify potential risk before the entire project is impacted; saving millions of dollars.
